

PHASE 2 – REQUIREMENT ANALYSIS

Data Flow Diagram and User Stories

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Data Flow Diagram

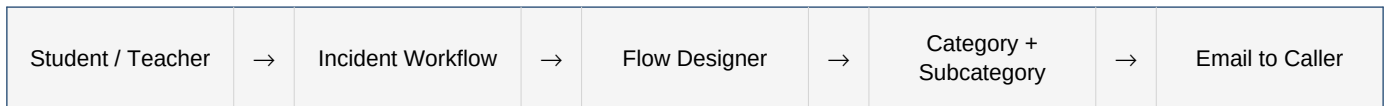

Figure 1: Project-specific data flow representation

2. Data Flow Description

1. A student or teacher creates an Incident Workflow record with Caller and Short Description.
2. The Record Created trigger starts the Flow when Category is empty.
3. Flow Logic evaluates predefined keywords in the Short Description.
4. The Update Record action writes the corresponding Category and Subcategory.
5. After classification, the Flow sends an email notification to the caller.
6. The resulting ticket remains stored in the structured Incident Workflow table.

3. User Stories

User Type	Epic	ID	User Story	Acceptance Criteria	Priority
Student/Teacher	Ticket Creation	US-01	Create an IT support ticket with caller and short description.	Ticket record is created.	High
System	Classification	US-02	Classify a Wi-Fi/network issue automatically.	Category=Network; Subcategory=Wi-Fi.	High
System	Classification	US-03	Classify a projector issue automatically.	Category=Hardware; Subcategory=Projector.	High
System	Classification	US-04	Classify password/login issue automatically.	Category=Access; Subcategory=Forgot Password.	High
System	Classification	US-05	Classify slow/hanging issue automatically.	Category=Performance; Subcategory=Slow Computer.	High
Caller	Notification	US-06	Receive an acknowledgement after ticket creation/classification.	Email is generated for caller.	High
IT Team	Tracking	US-07	Use structured category and state information for ticket handling.	Fields contain valid choices.	Medium
