

PHASE 2 – REQUIREMENT ANALYSIS

Solution Requirement

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Requirement Overview

The requirements are derived directly from the supplied Auto Ticket Classification using Flow Designer project, including its business requirements, custom table, dependent choice fields, Flow Designer logic and email notification.

2. Functional Requirements

ID	Requirement
FR-01	The system shall store IT ticket records in the Incident Workflow custom table.
FR-02	The system shall capture Caller as a reference to sys_user.
FR-03	The system shall capture Short Description and Description.
FR-04	Category shall provide Network, Hardware, Access and Performance choices.
FR-05	Subcategory shall provide Wi-Fi, Projector, Forgot Password and Slow Computer choices.
FR-06	Subcategory shall be dependent on Category.
FR-07	The Flow shall trigger on Record Created when Category is empty.
FR-08	Wi-Fi or Network keywords shall classify as Network / Wi-Fi.
FR-09	Projector keyword shall classify as Hardware / Projector.
FR-10	Password or Login keywords shall classify as Access / Forgot Password.
FR-11	Slow or Hanging keywords shall classify as Performance / Slow Computer.
FR-12	The Flow shall send an email to Caller → Email after classification.
FR-13	Ticket State shall support New, In progress, On hold, Resolved and Closed.
FR-14	The solution shall be maintainable using Flow Designer without custom scripting.

3. Non-Functional Requirements

Requirement	Description
Usability	Ticket creation and classification should be straightforward.
Reliability	Matching keywords should consistently produce the configured classification.
Maintainability	Flow branches and choice mappings should be easy to update.
Efficiency	Automation should reduce repetitive manual classification.
Traceability	Ticket fields and email acknowledgement should support follow-up.
Scalability	The design should allow additional keywords/categories to be added later.

4. Acceptance Conditions

- New ticket can be created successfully.
- Category and Subcategory are automatically populated for supported test descriptions.

- Dependent Subcategory choices correspond to the selected Category.
- Caller email notification is generated.
- Auto-numbering and reference fields work correctly.
