

PHASE 2 – REQUIREMENT ANALYSIS

Technology Stack

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Technology Selection

The implementation uses native ServiceNow components and Flow Designer, matching the no-code objective described in the project source.

Layer / Component	Technology	Purpose
Platform	ServiceNow	IT service management platform and project environment.
Data Table	Custom Incident Workflow table	Stores structured school IT ticket records.
User Reference	sys_user	Stores the Caller reference.
Group Reference	sys_user_group	Supports Assigned Group.
User Interface	ServiceNow form	Used to create and view ticket records.
Automation	ServiceNow Flow Designer	Runs the classification logic.
Trigger	Record Created	Starts the flow for newly created records when Category is empty.
Logic	If / Else If conditions	Checks keywords in Short Description.
Action	Update Record	Writes Category and Subcategory.
Notification	Send Email	Sends acknowledgement to Caller → Email.
Choice Configuration	Category/Subcategory/State	Provides standardized data values and dependency.

2. Key Configuration Values

Configuration	Value
Flow Name	Auto Classify School IT Tickets
Application	Global
Trigger	Record Created
Table	Incident Workflow
Trigger Condition	Category is Empty
Classification Input	Short Description
Classification Output	Category and Subcategory
Notification Target	Caller → Email
