

PHASE 5 – PROJECT DEVELOPMENT

User Acceptance Testing (UAT)

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this UAT document is to verify that the Auto Ticket Classification workflow meets the project requirements for automatic classification, dependent choices and caller notification.

2. UAT Scope

UAT covers ticket creation, keyword classification, category/subcategory values, email notification and structured data validation. Results that were explicitly documented in the supplied project are recorded below; other cases are marked for execution rather than assumed.

3. UAT Test Cases

ID	Scenario / Input	Expected Result	Actual Result	Status
TC-001	Short Description: WiFi not working in library	Category=Network; Subcategory=WiFi; email sent.	Documented as Network / WiFi and email sent.	Pass
TC-002	Short Description: Projector not turning on	Category=Hardware; Subcategory=Projector; email sent.	Documented as Hardware / Projector and email sent.	Pass
TC-003	Short Description containing Password or Login	Category=Access; Subcategory=Forgot Password; email sent.	To be recorded during team execution.	Pending
TC-004	Short Description containing Slow or Hanging	Category=Performance; Subcategory=Slow Computer; email sent.	To be recorded during team execution.	Pending
TC-005	Category/Subcategory dependency validation	Only relevant subcategories appear for selected category.	To be recorded during team execution.	Pending

4. UAT Execution Steps

1. Enter a Caller Name/reference.
2. Enter the test Short Description.
3. Save the Incident Workflow record.
4. Reload the record and inspect Category and Subcategory.
5. Confirm the corresponding email was generated for the caller.
6. For dependency testing, select Category and verify available Subcategory values.
7. Record screenshots and actual result/status for each test case.

5. UAT Acceptance Criteria

- New ticket records can be created.
- Supported keywords produce the configured Category and Subcategory.
- Category/Subcategory dependency prevents unrelated subcategory choices.
- Caller email notification is generated.

- Auto-number and reference fields work correctly.

6. Defect / Open Issue Analysis

Issue ID	Severity	Description	Resolution	Status
To be filled after testing	—	Record any failed or unexpected classification/notification.	To be filled after testing	Open/Pending
