

PHASE 4 – PROJECT PLANNING

Project Planning

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Project Planning

No.	Activity	Planned Work	Expected Output
1	Project Understanding & Problem Definition	Review school helpdesk manual classification problem and objectives.	Problem statement and project objective
2	Requirement Analysis	Define journey, user stories, DFD, functional requirements and technology stack.	Requirement analysis documents
3	Project Design	Define problem-solution fit, proposed solution and architecture.	Project design documents
4	Create Custom Table	Create Incident Workflow table and enable auto numbering.	Structured ticket table
5	Configure Fields	Create Caller, Category, Subcategory, descriptions, State and assignment references.	Configured form
6	Configure Dependency	Map Wi-Fi→Network, Projector→Hardware, Forgot Password→Access, Slow Computer→Performance.	Dependent choices
7	Create Classification Flow	Configure Record Created trigger and keyword branches.	Active automation flow
8	Configure Notification	Send email to Caller → Email after classification.	Email action
9	Test	Run Wi-Fi and Projector scenarios and inspect results/email.	Test evidence
10	Documentation	Prepare final report, FSD and supporting phase documents.	Submission-ready documentation

2. Resource Planning

Resource	Use
ServiceNow Instance	Project configuration and testing environment.
Flow Designer	Workflow design and automation.
Incident Workflow Table	Structured ticket storage.
Project Team	Configuration, testing, evidence capture and documentation.
ServiceNow Email Logs	Verification of generated notification.

3. Planned Testing Checkpoints

- Incident Workflow table exists and generates an auto-number.
- Category, Subcategory and State choices are present.
- Subcategory changes according to selected Category.
- Flow trigger is Record Created with Category empty condition.
- All four documented classification mappings are configured.

- Send Email action targets Caller → Email.
- Test records classify correctly and email logs contain the notification.
