

PHASE 3 – PROJECT DESIGN

Solution Architecture

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Architecture Overview

Student / Teacher	→	Incident Workflow	→	Flow Designer	→	Update Record	→	Email
-------------------	---	-------------------	---	---------------	---	---------------	---	-------

Figure 1: Solution Architecture

2. Architecture Components

Component	Role
Student / Teacher	Creates the IT support ticket.
Incident Workflow Table	Stores caller, descriptions, category, subcategory, state and assignment information.
Record Created Trigger	Starts the classification flow for a newly created record when Category is empty.
Flow Logic	Evaluates Short Description against predefined keywords.
Update Record	Writes the selected Category and Subcategory.
Dependent Choice Configuration	Restricts Subcategory values according to Category.
Send Email	Acknowledges ticket submission to the caller.
IT Helpdesk	Uses the classified ticket for subsequent support handling.

3. Architecture Flow

Student/Teacher → Incident Workflow → Record Created Trigger → Flow Logic → Category/Subcategory Update → Email Notification → IT Helpdesk

4. Configuration Design

Item	Configured Value
Custom Table	Incident Workflow
Flow	Auto Classify School IT Tickets
Trigger	Record Created
Trigger Condition	Category is Empty
Classification Field	Short Description
Category Choices	Network, Hardware, Access, Performance
Subcategory Choices	Wi-Fi, Projector, Forgot Password, Slow Computer
Notification	Send Email to Caller → Email

5. Design Validation

The architecture directly reflects the supplied implementation: custom structured ticket storage, dependent choice fields, Flow Designer classification branches, update actions and email notification.
