

PHASE 6 – PROJECT DOCUMENTATION

Functional Specification Document (FSD)

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

FSD-1. INTRODUCTION

Project Title: Auto Ticket Classification using Flow Designer

Platform: ServiceNow

Project Type: No-code ServiceNow Flow Designer automation

FSD-2. PROJECT OVERVIEW

The project automates classification of school IT helpdesk tickets. When a new ticket is created, Flow Designer evaluates keywords in Short Description and updates the ticket with the corresponding Category and Subcategory. An email acknowledgement is then sent to the caller.

Purpose and Objectives

- Automatically classify incidents at creation time.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Maintain structured and standardized ticket data.
- Provide automated caller acknowledgement.
- Use a maintainable no-code implementation.

Key Features

- Custom Incident Workflow table with auto-number.
- Caller reference and assignment references.
- Category and Subcategory choice fields.
- Dependent Category/Subcategory relationship.
- Record Created Flow trigger.
- Keyword-based If/Else If classification.
- Update Record actions.
- Send Email notification.

FSD-3. ARCHITECTURE

Caller	→	Incident Workflow	→	Record Created	→	Flow Logic	→	Update Record	→	Email
--------	---	-------------------	---	----------------	---	------------	---	---------------	---	-------

Architecture sequence: User → Incident Workflow → Record Created Trigger → Flow Logic → Category/Subcategory Update → Email → IT Helpdesk.

FSD-4. SETUP INSTRUCTIONS

1. Create/open the ServiceNow project or training instance.
2. Create an Update Set named Project Update Set, set State to In progress and Application to Global, and make it current.
3. Create the Incident Workflow custom table and enable Auto Number.
4. Create required fields: Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned to.
5. Add the Category, Subcategory and State choices.
6. Configure Subcategory as dependent on Category and map the four supplied dependencies.
7. Open Flow Designer and create Auto Classify School IT Tickets in the Global application.
8. Configure Record Created trigger on Incident Workflow with Category is Empty.
9. Add If/Else If branches for the supplied keyword rules and Update Record actions.
10. Add Send Email action to Caller → Email.
11. Save, activate and execute the documented UAT scenarios.

FSD-5. CONFIGURATION STRUCTURE

Configuration Item	Value
Custom Table	Incident Workflow
Flow Name	Auto Classify School IT Tickets
Application	Global
Trigger	Record Created
Trigger Condition	Category is Empty
Classification Input	Short Description
Network Rule	Wi-Fi or Network → Network / Wi-Fi
Hardware Rule	Projector → Hardware / Projector
Access Rule	Password or Login → Access / Forgot Password
Performance Rule	Slow or Hanging → Performance / Slow Computer
Email Recipient	Caller → Email

FSD-6. DATA / FIELD SPECIFICATION

Field	Type / Reference	Configured Choices / Purpose
Number	Auto Number	Unique ticket identifier
Caller	Reference: sys_user	Identifies requester
Category	Choice	Network, Hardware, Access, Performance
Subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer
Short Description	String	Primary classification input
Description	String	Detailed issue information
State	Choice	New, In progress, On hold, Resolved, Closed
Assigned Group	Reference: sys_user_group	Support group assignment
Assigned to	Reference: sys_user	Individual assignment

FSD-7. AUTOMATION / WORKFLOW RULES

Rule ID	Automation Rule
BR-01	Process newly created Incident Workflow records when Category is empty.
BR-02	If Short Description contains Wi-Fi or Network, set Network / Wi-Fi.
BR-03	If Short Description contains Projector, set Hardware / Projector.
BR-04	If Short Description contains Password or Login, set Access / Forgot Password.
BR-05	If Short Description contains Slow or Hanging, set Performance / Slow Computer.
BR-06	After classification, send email to Caller → Email.
BR-07	Maintain standardized choices and dependent Subcategory mappings.

FSD-8. RUNNING THE WORKFLOW

1. Open the Incident Workflow form.
2. Enter/select a Caller.
3. Enter a supported Short Description.
4. Save the record.
5. Reload the form and inspect Category and Subcategory.
6. Check the email log for the acknowledgement.
7. For dependency testing, inspect Subcategory choices after changing Category.

FSD-9. TESTING AND ACCEPTANCE

Acceptance ID	Acceptance Criteria	Evidence
AC-01	Ticket record can be created with required fields.	Incident Workflow record
AC-02	Wi-Fi/network issue becomes Network/Wi-Fi.	UAT record/screenshot
AC-03	Projector issue becomes Hardware/Projector.	UAT record/screenshot
AC-04	Password/login issue becomes Access/Forgot Password.	UAT record/screenshot
AC-05	Slow/hanging issue becomes Performance/Slow Computer.	UAT record/screenshot
AC-06	Caller receives configured email.	Email log/preview
AC-07	Subcategory dependency follows Category.	Form screenshot

FSD-10. ERROR AND EXCEPTION HANDLING

- If the Flow does not run, verify that it is active and that the Record Created trigger and Category-empty condition are correct.
- If a keyword does not classify, verify the exact configured condition and extend the keyword list when required.
- If Subcategory values are incorrect, review the dependent field configuration and choice mappings.
- If email is not generated, inspect the Send Email action and ServiceNow email logs.
- If a field reference does not resolve, verify the referenced sys_user or sys_user_group record and permissions.

FSD-11. NON-FUNCTIONAL REQUIREMENTS

NFR	Requirement
Usability	Ticket creation should be straightforward for students and teachers.
Reliability	Configured keyword rules should consistently produce the intended classification.
Maintainability	Flow branches and choices should be easy to modify.
Efficiency	Automation should reduce repetitive manual classification.
Traceability	Ticket record and notification should support follow-up.

NFR	Requirement
Scalability	Additional categories and keyword branches should be extendable.

FSD-12. KNOWN ISSUES / CONSTRAINTS

- The classifier depends on predefined keywords and therefore may not recognize unseen wording.
- The supplied implementation focuses on four common issue types.
- Actual email delivery depends on the ServiceNow instance configuration.
- Actual UAT evidence should be captured from the team's ServiceNow instance.
- No machine-learning model is included in the current implementation.

FSD-13. FUTURE ENHANCEMENTS

- Expand keyword coverage and add additional issue categories.
- Automate assignment groups based on classification.
- Add SLA monitoring, escalation and dashboards.
- Introduce predictive intelligence after sufficient ticket history is available.
- Integrate knowledge articles or recommended resolutions.

FSD-14. APPROVAL / SIGN-OFF

Role	Name	Signature	Date
Student / Team	_____	_____	_____
Faculty / Mentor	_____	_____	_____
Reviewer	_____	_____	_____
