

PHASE 1 – IDEATION

Define Problem Statement

Field	Details
Team ID	6ab4c3e86603573ccfb5068c
Project Name	Auto Ticket Classification using Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

1. Template-aligned Problem Statement

Problem Statement	I am (Customer)	I'm trying to Process	But	Because	Which makes me feel
PS-1	School IT helpdesk staff	Support student and teacher IT incidents efficiently	Each ticket must be reviewed and categorized manually	Issue type is not automatically identified	Concerned about workload and inconsistent routing
PS-2	Student/Teacher requester	Get the issue routed correctly after submitting a ticket	Manual classification can delay the next support step	Category and subcategory are selected by staff	Frustrated by avoidable waiting

2. Selected Core Problem Statement

The school IT helpdesk currently relies on manual review to classify incident requests. This creates additional effort and can delay consistent routing of common issues such as Wi-Fi, projector, password and slow-computer problems.

3. User Story from Problem

As an IT helpdesk team member, I want new incident tickets to be classified automatically from their short description so that category and subcategory are assigned consistently without manual intervention.

4. Project Objectives

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Maintain structured and standardized ticket information.
- Provide an automated email acknowledgement to the caller.
- Keep the solution no-code, maintainable and scalable.

5. Problem Impact

Area	Impact
IT Staff	Manual classification consumes time and may produce inconsistent selections.
Requester	Incorrect or delayed classification can affect how quickly the issue is handled.
Data Quality	Category and subcategory may be inconsistent without standardized choices.
Communication	Caller needs confirmation that the ticket has been submitted.
Scalability	Manual review becomes less efficient as ticket volume increases.

6. Problem-to-Project Link

The project therefore focuses on a ServiceNow Flow Designer automation that reads predefined keywords from the short description and updates Category and Subcategory accordingly.
